I graduated, cum laude, in Mathematics and got my PhD in Mathematics and Applications in 2003 and in 2006 at the University of Genoa, respectively, where I'm currently a researcher. My research interests include lightning modeling and its effects on the electric infrastructures as well as direct and indirect electromagnetic problems, microgrid energy management systems. In 2017 I'm at the head of the start-up WiGaar S.r.L., whose main activities are related to project, control, management and optimization of electrical and thermal energy flows inside smart microgrid.

I'm co-author of more than 100 scientific contributions published in international journals or presented at international conferences.
